

A future they recognize. A friend they trust.

Give someone their first investment.

Themed stock-token gifts.

A personal note. A pack to open.

Kayle · Builder

Built on Solana

Current local preview · Funded gifts are next

The first investment asks for a lot.

Know what to buy. Learn a new app. Risk your own money.

FAMILIARITY

“I know these companies.”

A recognizable future gives the investment context.

TRUST

“My friend chose this.”

A personal gift creates a reason to take the first step.

START

“I already have something.”

A small position makes the next decision concrete.

Product hypothesis to validate. The gift reduces the recipient's initial funding burden; the assets can still lose value.

One investor. One friend who hasn't started.

THE SENDER

Already invests. Holds USDC.

Wants to give something more personal than cash and more lasting than a hot token.

“You keep talking about AI.
Here’s a little exposure to that future.”

THE RECIPIENT

Knows the brands. Has an X account.

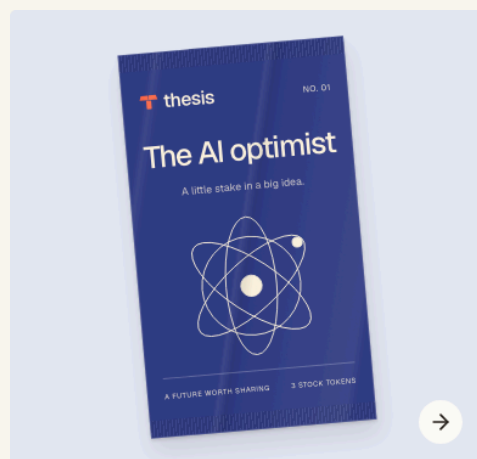

Is curious about investing, but hasn’t learned wallets or built a portfolio.

“A gift from Alex.
Made around something I care about.”

Initial audience hypothesis: adult senders and recipients in one verified eligible market. An X account alone does not establish eligibility.

Pick a future. Make it personal.

Choose a pack, a budget, an X handle, and a note.

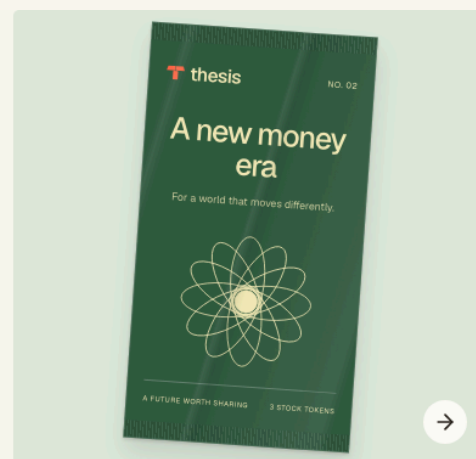

The AI optimist

For the friend already living in the future.

Make this gift →

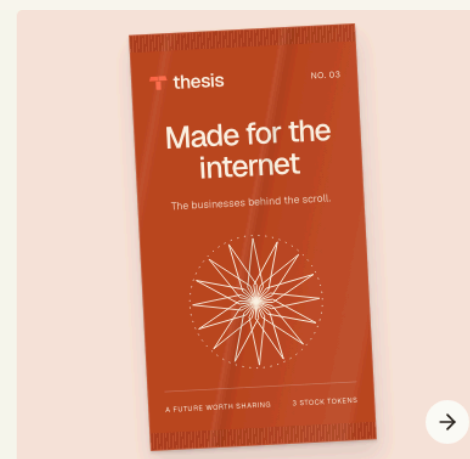

A new money era

For the one who sees money differently.

Make this gift →

Made for the internet

For your very online favorite person.

Make this gift →

Actual local preview. Each pack wraps an existing, versioned allocation. The sender can inspect holdings and weights before proceeding.

The intended live experience

A friend sends it. You sign in with X. Open your first position.

A familiar identity at the door.

A personal note inside.

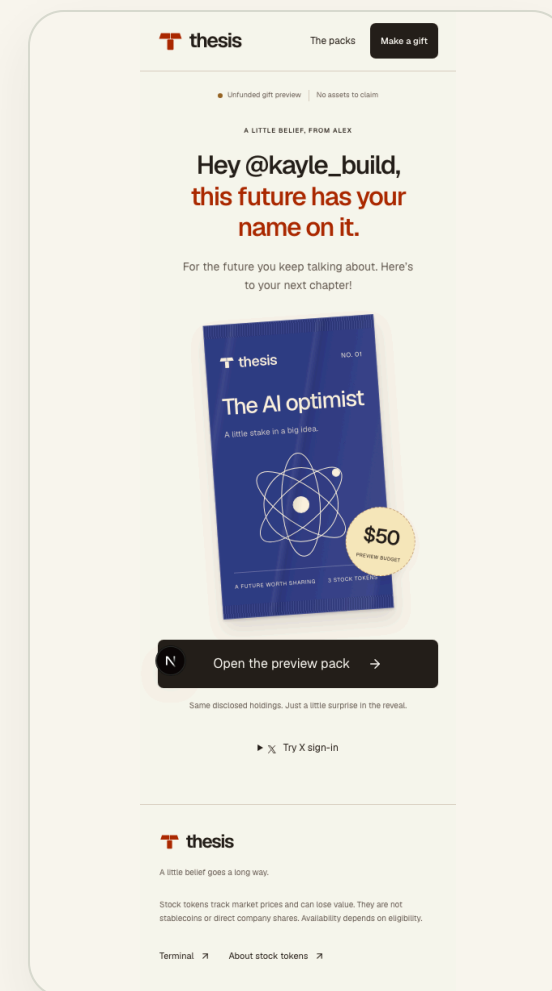

Underlying stock tokens in your wallet.

The allocation is fixed and disclosed.

The surprise is the reveal, not the payout.

Today: a working, unfunded pack preview.

Verified X claims and asset delivery are not live.

A gift with a reason to hold it.

Understand the companies,
the thesis, and what could go wrong.

	0140% OF PACK  Microsoft MSFTx Microsoft rents out the compute and sells the software that runs on it. It earns whether a customer builds their own system or buys one already built. \$20.00 illustrative allocation	0235% OF PACK  NVIDIA NVDAx Almost everything being built runs on hardware NVIDIA designs. When spending rises, this is the first place the money lands. \$17.50 illustrative allocation	0325% OF PACK  Palantir Technologies PLTRx Palantir sells the layer that turns a model into a decision inside a large organisation. It is the part of the spending that has to justify itself to a budget holder. \$12.50 illustrative allocation	
--	--	---	--	--

Actual local preview. Displayed dollar amounts illustrate budget allocation; they are not funded balances or market quotes. Ongoing portfolio ownership is next.

The sender brings the next investor.

Make the invitation part of the product.

01 / GIVE

Someone buys a gift.

A personal relationship supplies the first introduction.

02 / CLAIM

A friend starts investing.

The gift becomes a small portfolio with a reason behind it.

03 / CONTINUE

They fund the next step.

Invest more themselves, or introduce another friend.

The proof is a second decision made with their own money.

Proposed acquisition loop, not proven virality. Measure repeat use after the novelty of the reveal has passed.

xStocks brings stocks onchain. Thesis brings the invitation.

EXPOSURE

Recognizable companies.

Existing stock tokens supply economic exposure. Thesis does not issue a new basket coin.

DELIVERY

Programmable transfers.

Solana tokens and USDC let a funded gift connect to a recipient's wallet.

EXPERIENCE

One human reason to start.

The thesis, personal message, and claim experience turn infrastructure into an invitation.

Start with eligible stock-token packs. Reuse existing assets and execution infrastructure.

Stock tokens are not stablecoins and do not confer direct shareholder rights. Availability and liquidity vary. Sources: [Kraken / xStocks](#) · [xStocks legal overview](#) · [Jupiter execution](#)

Stock gifting already exists. The opening is distribution.

Personal enough to send. Simple enough to receive.

THE WEDGE

Give a belief.

A small, intelligible pack around a future the recipient already cares about.

THE CHANNEL

Reach someone by X identity.

An invitation with a known sender and a path into investing without a wallet extension.

THE ADVANTAGE TO BUILD

A trusted path to a first position.

Reliable claims, useful packs, repeat senders, and an experience people recommend.

The pack animation is easy to copy. Repeat distribution has to be earned.

No established moat or exclusive partnership is claimed. Precedent: [Stockpile's digital stock-gift offering, 2022](#). The proposed combination and its demand remain to be validated.

A paid gift. A measurable next step.

BUSINESS HYPOTHESIS

A transparent sender-paid fee.

Show the gift budget, service fee, and estimated execution costs separately before funding.

Validate contribution after execution, gas, identity, support, and failed-claim costs.

FIRST PILOT · PROPOSED

20 senders. Their own money.

Begin in one verified eligible market with three reviewed packs and personal invitations.

Track completed claims, cost per claimed gift, self-funded follow-on purchases, and repeat gifting.

Pilot design, not traction. No fee rate, revenue, conversion, or market-size claim. No automatic reinvestment or recipient referral subsidy assumed.

The gift experience works. The funded claim is next.

BUILT AND TESTED LOCALLY

Choose → fund → open

- Three packs, \$10–\$1,000, handle and note; unfunded preview
- 3D foil-tear reveal, confetti and sound, over confirmed holdings
- Gift lifecycle: X-account binding, chain-verified funding
- Race-safe claim, delivery via the existing buy engine
- Recovery and export wired; no-refund terms stated

REQUIRED BEFORE FUNDED PILOT

Connect → exercise → decide

- X account lookup (API token); provisioning is on
- A location check — open to anyone for the hackathon
- One real gift end to end, including X sign-in
- Recovery exercised on a real recipient account
- A sell path — not in Thesis yet

Reviewed 23 September 2026. Funded gifting is switched on for beta except X lookup. Screenshots show a local, unfunded build. No live gifts, funded claims, traction, or deployment status are implied.

Trade Thesis

The next investor could start with a gift from a friend.

Seeking early backers and partners for eligible
stock-token distribution, onboarding, and execution.
